Kubernetes API
the cluster manager
starts pods
requests executors
Executor pod
spark.executor.cores task slots
runs tasks • caches blocks
heartbeats to the driver
Client
your session, or the
Kyuubi SQL gateway
submits the query
Driver
runs your SparkSession
plans the query (Ch. 2)
DAG + task scheduling
collects results
tasks / results / heartbeats
Executor pod
spark.executor.cores task slots
runs tasks • caches blocks
heartbeats to the driver
Executor pod
spark.executor.cores task slots
runs tasks • caches blocks
heartbeats to the driver
one application = one driver + many executors
