1. Ask source
for new offsets since
the last checkpoint
2. Run one
micro-batch
ordinary job/stage/
task machinery
3. Commit to
orders (Iceberg)
one snapshot,
keyed by batch id
repeats forever (ProcessingTime)
or once and stops (Once /
AvailableNow)
a restart replays from here:
same offsets, same rows,
no duplicate commit
4. Write offset
to checkpoint
only after step 3
succeeds
